DETAILED ACTION

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1 and 4-9 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kresge et al, US Patent No. 5,665,183.

Kresge et al discloses butyl rubber compositions having 1-45 pbw/100 pbw reactive rubber of silicate smectite clay platelets, such as montmorillonite incorporated therein. The rubbers used in the invention may be copolymers of isobutylene and isoprene. The layered silicate is organically modified when it is mixed with water and then with a reactive rubber to form a complex that is subsequently solubilized. This complex along with the non-reactive butyl rubber is vulcanized with sulfur containing agents. See col. 3, line 42 through col. 4, line 40, col. 5, lines 33-58, example 4 and claims 1, 3, 9 and 16. Other compounding agents may also be included in the compositions. See col. 4, lines 62-67.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-4 and 6-10 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by WO 02 100935.

The World reference teaches elastomeric polymer/clay compositions that are vulcanized with sulfur containing agents. Halogenated butyl rubber is specifically claimed. The layered clays, such as montmorillonite, may be treated with organic molecules. The clays are used in amounts ranging from 0.5 to 10 wt % based upon the polymer content. See page 7, lines 14-27, page 16, lines 5-21, page 18, lines 4-21, page 19, lines 4-12, page 25, line 18 through page 26, line 6, page 29, lines 10-15 and claims 1, 11 and 16-18.

Response to Arguments

3. Applicant's arguments do not comply with 37 CFR 1.111(c) because they do not clearly point out the patentable novelty which he or she thinks the claims present in view of the state of the art disclosed by the references cited or the objections made. Further, they do not show how the amendments avoid such references or objections.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 1714

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
